

## Computing Year 3

### Autumn 1

## Computer Science

### Key Vocabulary:

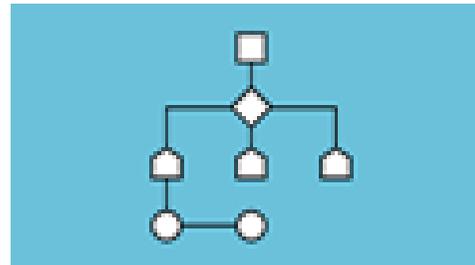

Input - information that is "put in" to something

Process - a program running in a computer

Output - the results produced by the computer

Hardware - the computer's physical parts

Software - the programs, or instructions, that tell the hardware what to do

### Key Questions:

What is a computer?

How do different devices work?

### Key Facts:

An input device sends information in to a computer and an output device sends information out from a computer.
